

Azure Injector Module

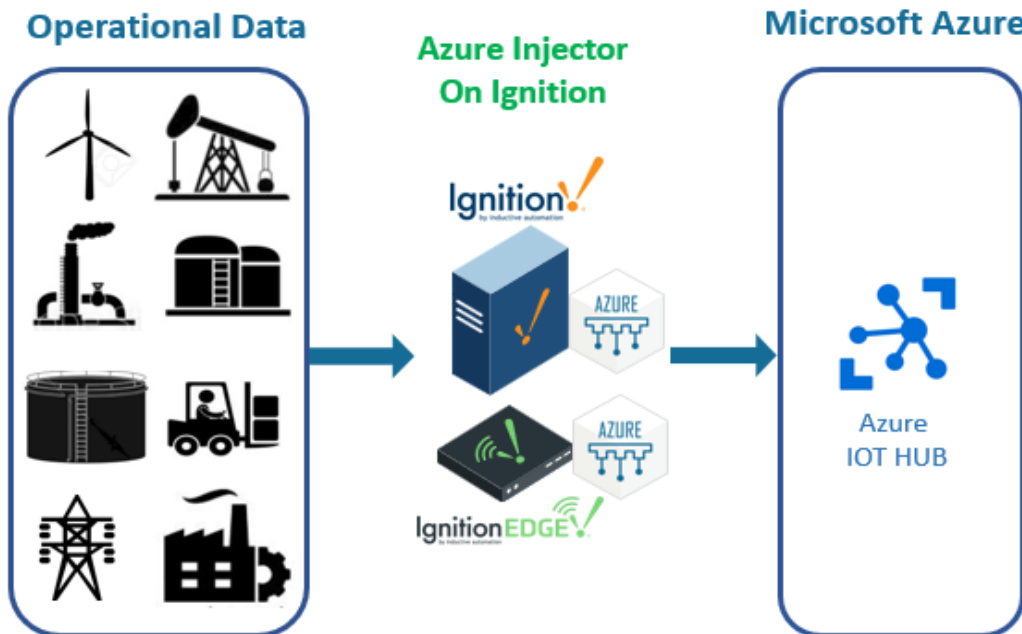

By Cirrus Link Solutions

The Azure Injector module easily connects any tag data from the Inductive Automation Ignition platform into the Azure cloud infrastructure. With a simple configuration, tag data will flow into Azure IOT HUB or Event HUB using an easy to read and efficient JSON representation.

With the operational data from Ignition in Azure cloud you can unleash the power of the Azure Platform for big data applications, predictive maintenance, predictive analytics, AI, and vastly improve operations and ultimately insight into your business processes.

Operational data seamlessly pushed to the cloud

Features

- Connects to any Tag Data
- Easy to Configure
- Efficient reporting scheme
- Use in Ignition Gateway or EDGE
- Does not require MQTT infrastructure

Supported Operating Systems

Windows Server 2008/2012, Windows 7, 8, and 10. Ubuntu Linux 12.04 or later Other Java SE-enabled OSes1

Supported Databases

- Microsoft® SQL Server
- MySQL
- Oracle
- PostgreSQL

Requirements

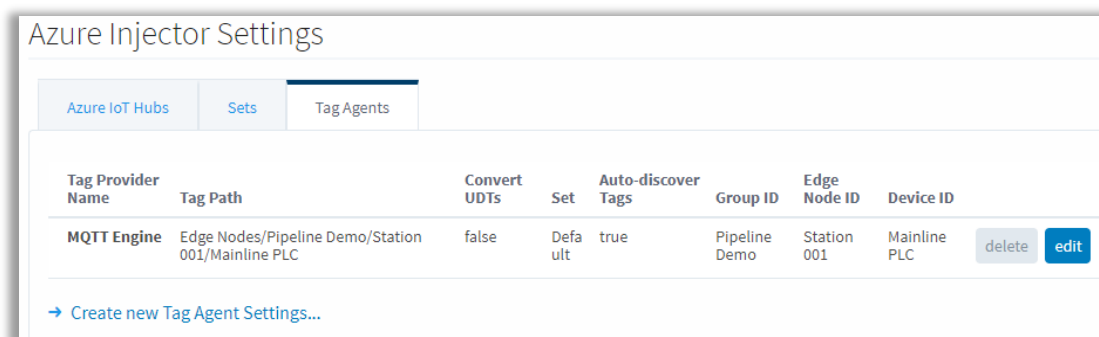

- Java SE 8 (server)
- Java SE 6, 7, or 8 (client)
- 1024 MB RAM3
- 1 GB free HD space
- (Requirements vary by usage)

Ignition is compatible with any Java SE 8-enabled OS. Full support is only offered for listed OSes.

The Azure Injector module is available for both Ignition Gateway and Ignition Edge, allowing data to flow directly to the cloud from any point in the network.

Extremely simple to configure

Azure Injector Module

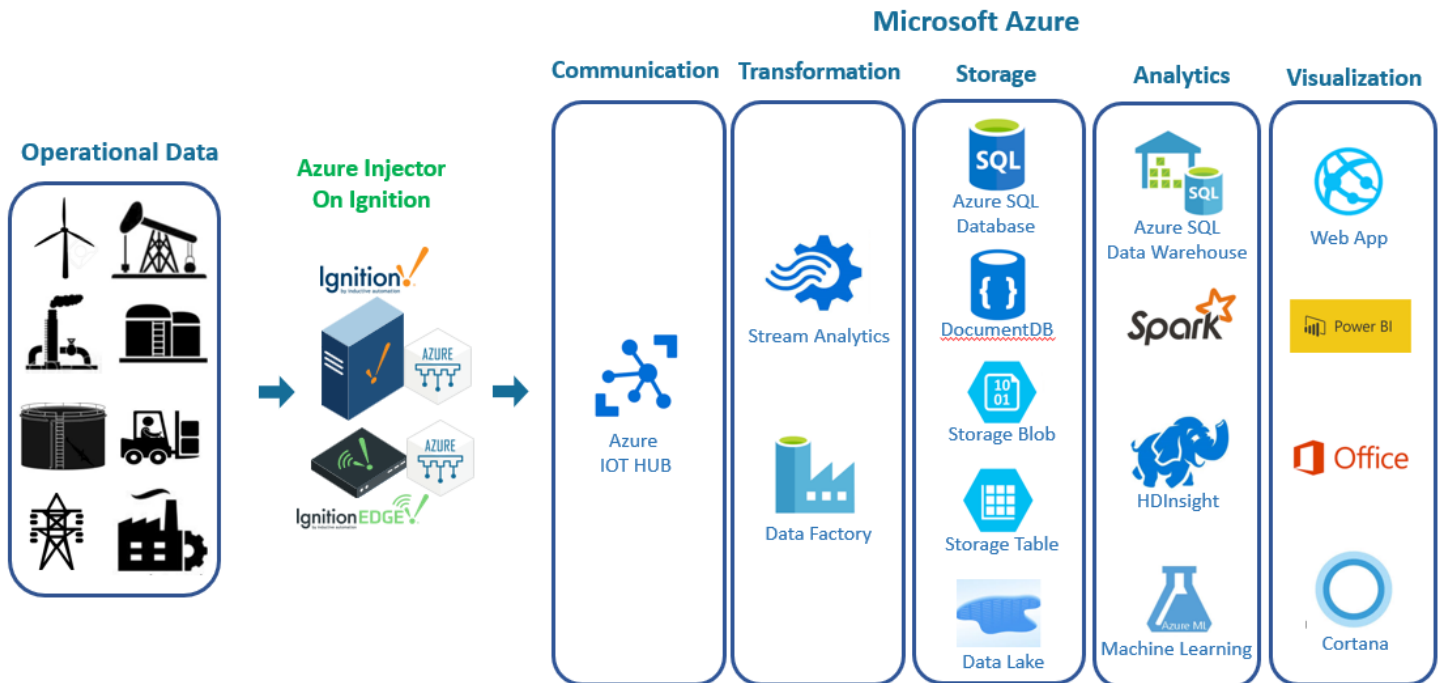

Operational data is available to big data analytics tools

Once the data is inside Azure cloud, there is a large selection of tools and business partners available specifically designed for big data analytics.

Using Azure big data tools, the user will be able to perform:

- Big Data analytics
- Predictive maintenance
- Predictive analytics
- Artificial Intelligence

Gain insight needed to deliver intelligent actions that improve customer engagement, provide market differentiators, increase revenue, and lower costs.

Powered by Ignition: Azure Injector Module is powered by Ignition, the powerful HMI, SCADA, and MES software platform by Inductive Automation providing cross-platform compatibility, unlimited free clients, robust out-of-the-box SQL database support, and fast installation.

Leveraging the full power of the Ignition universal industrial automation platform with fully integrated HMI/SCADA functionality, the Azure Injector Module will unleash the true value of your IIOT Data.
